Accessories

Multi-position saddle (MPS)
The multi-position saddle (MPS) is the ultimate positioning accessory for gait. It quickly fine tunes pelvis positioning for anterior or posterior use. Adjustable in five directions to accommodate each client's posture. the MPS easily attaches to both the dynamic and standard upper frames.

Seat pad Dimensions	Size 1+2	Size 3
Front width (a)	7,5 cm	11,5 cm
Middle width (b)	4,5 cm	6,5 cm
Rear width (c)	9 cm	13,5 cm
Length (d)	24 cm	27,5 cm

Saddle depth – adjusts to optimally position the pelvis in relation to the upper body to encourage forward motion during ambulation.

Adjustment range: 13 cm

Saddle angle – is adjustable to position the pelvis in anterior or posterior tilt for the most effective gait pattern.

Forward: 7.5° and 15°
Back: 7.5° and 15°

Saddle height – adjusts to finetune the position of the pelvis during gait.

Adjustment range: 22 cm

Hip corral – depth and height adjustmentsprovide cushioning and support for thepelvis at the level of ASIS.

Adjustment range depth: 8 cm
Adjustment range height: 8 cm

momo motion. - The tricycle with E-drive

A motor support when using a tricycle is useful for many users and necessary due to the indication. Thus, for some users, the starting situation is often the only obstacle to independent use of the bike. With clinical pictures such as dystrophies, permanent support is required to compensate the relative loss of muscle strength.

In order to make the medical benefits of riding a tricycle accessible to these people, we have developed our **momo motion.**

The corresponding order form for our **momo motion.** as well as further information on the possibilities of motor support can be found on page 94 or on our homepage at **www.schuchmann.de/en/momo-motion.**

Note

Adult bike with rear engine
If the adult bike on which the **follow-me momo.** is to be mounted is equipped with a rear engine, then an adapter other than described above is needed. Please contact us in such case and we will work with you to develop an adapter solution.

ⓘ If the cable of a rear motor is routed through the axle, compatibility with the **follow-me momo.** is not given.

momo motion. or momo tricycle. with electric drive in combination with the follow-me momo.
Generally we do not recommend to pair a **momo motion.** or **momo trycyle.**, which is equipped with an electric drive, via **follow-me momo.** with an adult bike. This can lead to dangerous situations due to the support that comes from the electric drive.
Please contact us if you still require this combination. We will gladly try to find a solution together with you.

E - drive

DirectPower E-drive from Heinzmann

The **momo motion.** is equipped with the DirectPower E-drive from Heinzmann. This allows us to offer you a wear-free and silent direct drive. The motor is designed to be brushless and without gears. This minimises maintenance and wear and eliminates motor noise. The recuperative system automatically recharges when driving downhill or braking. This means that the range can be increased by up to 15 %. The existing force of the user is measured by a force sensor integrated in the bottom bracket, and the assistance from the electric drive is adjusted.

Choose the suitable E-drive for the **momo motion.** from the following configurations. You can choose whether the drive should be equipped **with or without start-up assistance**. In addition, you can choose between a **beginner version** and an **advanced version**. The difference here is the **start-up** and the **top speed** of the various modes **Eco**, **Standard** and **Power**, which can be selected via the display. An analysis cable can be used to change the selected version at a later date.

dynamic pacer.

The dynamic gait trainer.

Sometimes less is more. Even without full equipment, the **dynamic pacer.** already provides optimal support for walking, running or romping. For example, equipped as a light version, only with the new hand grips, the new chest system and the MPS.

Further information can be found from page 80.

E - drive

DirectPower E-drive from Heinzmann

The new **momo therapy bike.** is equipped with the DirectPower E-drive from Heinzmann. This allows us to offer you a wear-free and silent direct drive. The motor is designed to be brushless and without gears. This minimises maintenance and wear and eliminates motor noise. The recuperative system automatically recharges when driving downhill or braking. This means that the range can be increased by up to 15 %. The existing force of the user is measured by a force sensor integrated in the bottom bracket, and the assistance from the electric drive is adjusted.

Choose the suitable E-drive for the **momo therapy bike.** from the following configurations. You can choose whether the drive should be equipped **with or without start-up assistance**. In addition, you can choose between a **beginner version** and an **advanced version**. The difference here is the **start-up** and the **top speed** of the various modes **Eco**, **Standard** and **Power**, which can be selected via the display. An analysis cable can be used to change the selected version at a later date.

The e-drive excludes a rigid gear rim and brings with it an additional weight of approx. 10 kg.

E - drive configuration

DirectPower E-drive from Heinzmann – without start-up assistance

Subframe

Transfer and care subframe hts. – made of stainless steel, powder-coated, incl. footplate and 100-mm double castors, height-adjustable. With the transfer and care subframe HTS, we provide a further subframe for the Rifton HTS shower and toilet chair in order to better fulfil the transfer and care requirements of the user and their assistant. With the help of a pedal on both sides of the subframe the height can be adjusted. The seat can simply be tucked forward and backwards.

Commission:

We hereby offer a way of customizing our aids **smilla.**, **sofie.**, **madita.**, **madita-fun.** and **madita-fun mini.** You can provide the respective back pad with the name of the user.

Simply assign the name embroidery to the product and tell us the desired name. Then you have to only send this form together with the order form of the particular product and you will receive the ordered product with the desired name on the back pad.

- The height of the embroidery is 2.5 cm (2 cm for **madita-fun mini.**) – width is therefore given by the length of the name
- The embroidery is placed on the right side of the back pad (in the middle at **madita-fun mini.**)
- For the embroidery we use a silver-white yarn
- You can see the font that is used for the embroidery in the accompanying picture

Note: an embroidery of our Flexi fabric is not possible

Upgrade your products with our fabrics, as they combine excelent quality with superb design. We provide you with a collection of the lastest designs, different materials and the following convincing benefits:

- Simple and easy processing
- High abrasion resistance and durability
- Flame retardant in accordance with DIN EN 1021-1+2
- Skin-compatible in accordance with DIN EN ISO 10993-5
- Fulfils the requirements laid down in the MPG (Medical Products Directive) for your seat shells and special constructions

Cleaning + disinfection.

Introduction to using our products.

Please note that **people with special needs, reading difficulties and impaired vision** must ask a parent, supervisor or technical advisor to read out or explain this technical documentation so that safe usage of our products can be guaranteed.

We would like to point out that only **spare parts and accessories** from our company may be used and installed so as not to endanger the safety of the users. In individual cases, the combination of our products with those of other manufacturers may require clarification with your specialist retailer or with us as the manufacturer.

Settings and adjustments to the product or accessories may only be made by people who have been given the necessary instructions by a medical product advisor. Please ensure that none of the user's extremities are in the respective area when making adjustments of any kind to minimise the risk of injury

The respective product should be reduced to its smallest dimensions **for transportation**. For example, reduce the seat, the armrests, the back etc. to the smallest dimensions. Remove the parts of the product that can be easily removed, e.g. the wheels of the **todd.** standing frame, the handlebars of the **momo.** etc. Fold up the foot support on products with this feature. Please see the User Manual belonging to the respective product for more detailed information.

Instructions for use on the respective products are available on www.schuchmann.de/en/media-library.

If applicable, the **product-specific cleaning guidelines** in the respective instructions for use are to be taken into consideration.

Cleaning guidelines for the different materials.

The care and cleaning of our products should be carried out at regular intervals to ensure that they remain functional over their useful life. The choice of suitable cleaning agents is crucial.

Wood: Wooden parts should be cleaned with a damp cloth or similar. When using detergents, please consult the manufacturer's instructions regarding detergent concentration. Caustic household detergents or corrosive substances are not suitable. Never leave natural wood in a damp or wet condition over long periods, as it will take on water and can change in shape (swelling). Therefore, only wipe and clean damp (i.e. with wrung-out cloths). Test a small, non-visible area for compatibility.

Powder-coated parts: Aluminium parts should be cleaned with a sponge or damp cloth using normal antibacterial household detergents.

Stainless steel: Stainless steel parts should be cleaned using a sponge or damp cloth with a mild soap. Bleach must not be used.

Covers / **Fabric:** Covers and fabric should be washed at 40° C in the washing machine using normal detergent. Do not tumble dry.

Plastics: Plastics should be cleaned using a sponge or damp cloth with mild soap. Bleach must not be used.

PU (polyurethane): PU parts should only be cleaned using a sponge or damp cloth with a mild soap. Bleach must not be used.

Should you have any queries, you are welcome to contact us directly!

Disinfection measures by material type.

Various products can be used for **surface disinfection** of **metal**, **wood** and **plastic parts**. The disinfectants used should have a wide range of efficacy (bactericidal, levurocidal and virucidal) and be approved for medical devices.

Suitable disinfectants can be found in the KRINKO/BfArM recommendation.

Liquid disinfectants are available as a ready-to-use solution which is sprayed on and evenly applied with a soft cloth. Alternatively, cloths soaked with disinfectant can be used, with to which the products are wiped all over. In both cases, a complete wetting be respected.

The exposure times may vary and can be found in the manufacturer's instructions for the agents used. However, products based on alcohol should not be used.

Disinfection systems achieve very good results. There the contaminated devices are completely and disinfected by cold fogging. Methods of disinfection by icing are not permitted.

If necessary, the **product-specific disinfection instructions** in the respective instructions for use are to be taken into consideration.

Hygiene measures for all our products.

1. Who should carry out the hygiene measures?

Users or accompanying persons themselves, service staff from specialist dealers and other authorised institutions.

2. How regularly?

- Cleaning: Regularly and as required (in case of soiling)
- Cleaning & disinfection: Regularly and as required (in case of possible contamination and before maintenance and servicing)
- Prior to cleaning and disinfection: Damaged sub-frames or components must first be removed or repaired.
- Processing by trained personnel (intensive cleaning and disinfection): Before passing on to other users.

3. With what should the work be carried out?

We recommend wearing protective gloves (e.g. made of nitrile or butyl rubber)! Avoid the penetration of liquids into Bowden cables, frame tubes or similar. Remove visible soiling with a damp sponge cloth and, if necessary, a cleaning agent. Do not use scouring agents or aids!

4. How should the work be conducted exactly?

For cleaning, all accessible surfaces are cleaned with a damp sponge cloth and, if necessary, a suitable cleaning medium. Then dry the surfaces with a cotton or disposable cloth. Hard-to-access places can also be dried using a hairdryer on its lowest setting. The use of high-pressure cleaners is not permitted, as their use can lead to damage to the products.

For disinfection the disinfectant should be used according to the manufacturer's instructions.

Ensure **complete wetting**. If necessary, remove excess preparation quantities with unstained disposable tissue. It is particularly important to observe the exposure times of the manufacturers!
