momo motion. - The tricycle with E-drive

A motor support when using a tricycle is useful for many users and necessary due to the indication. Thus, for some users, the starting situation is often the only obstacle to independent use of the bike. With clinical pictures such as dystrophies, permanent support is required to compensate the relative loss of muscle strength.

In order to make the medical benefits of riding a tricycle accessible to these people, we have developed our **momo motion.**

The corresponding order form for our **momo motion.** as well as further information on the possibilities of motor support can be found on page 94 or on our homepage at www.**schuchmann**.de/en/momo-motion.
